Abstract

The project is designed as a junior research group. It is divided into three individual projects, which together make a conceptual-theoretical as well as an empirical-analytical contribution to a sociology of public goods.
Within the framework of the junior research group, Maike Simmank and Andreas David Schmidt are

working on their doctoral theses on "Cohesion as a Local Challenge" and "Workin Health Care". Sarah Herbst made an empirical contribution to the sociology of the pandemic with the publication project "Simultaneously unequal - In the midst of the pandemic working world", the content of which deals with the experiences and perceptions of various professional groups during the Corona crisis. The sociological interview volume casts insights into society and its working realities between the third wave of infection and the vaccination campaign.

Contributor

Herbst, Sarah; Reinhold, Maike; Schmidt, Andreas David

Funding Institution

BMBF

Temporal Coverage

1/2021 - 12/2023

Time Dimension

cross-sectional

Sampled Universe

study unit

Sampling

theoretical sampling; snowball sampling

Collection Mode

face-to-face, online interview, group discussions

Geograhic Coverage

Germany; south lower saxony

Resource Type

transcripts: docx, RTF
