German Social Cohesion Panel

Established in 2021, the German Social Cohesion Panel (SCP) is a wide-ranging representative longitudinal study of private households in Germany, carried out in collaboration of the Research Institute Social Cohesion (RISC) and the German Socio-Economic Panel (SOEP).

The aim of the SCP Documentation is to thoroughly document the survey's data collection and data processing.

1 General Information

The P dataset contains the data from the SCP individual questionnaire. Some questions from the questionnaire are not included in the dataset due to data privacy. Each person (PID) who participated in the survey in a particular survey wave (WAVE) has one row in the dataset.
Where years are mentioned in survey questions, they usually refer to the year preceding the survey. The questions in this codebook only show the most recent instance of each question; consequently, the years quoted for the same question in earlier waves may differ from the year shown here. The limits for mini-jobs and midi-jobs, as well as the names of social security benefits such as unemployment benefit, are regularly updated in line with the relevant regulations.
In some places in the documentation and in the data, year numbers are used, for example, for the names of variables and of the questionnaire instrument. These year numbers are always based on the field start of the data collection of the corresponding survey wave.
Survey variables might be missing, that is, lacking a valid code or value, for different reasons. In the SCP, negative values are not valid for any variable, but are used instead to code different reasons for missing information. There are two possible origins of missing values: the respondent's answer or the survey design. In the first case, the respondent may refuse to answer, not know an answer, report invalid or implausible values, or break off the interview. In the second case, the interview design may exclude respondents with certain characteristics from some questions (e.g., owner-occupiers will not be asked about the amount of rent they pay). The following codes are used:
[-1] No answer
[-2] Does not apply
[-3] Implausible value
[-4] Inadmissible multiple response
[-5] Not included in this version of the questionnaire
[-6] Version of questionnaire with modified filtering
[-7] Only available in less restricted edition
[-8] Question not part of the questionnaires this wave
[-9] Don't want to answer [only CAWI]
[-10] Break-off [only CAWI]
[-1] No answer – Respondent declines to answer the question. Is assigned if the question is not answered in the paper questionnaire and if "I cannot answer that" is ticked in the online questionnaire. Note that the paper questionnaire does not distinguish between a refusal to answer and a true "don't know" except for a few questions where "don't know" is an additional answer option.
[-2] Does not apply – Information may be missing when a question is not asked because it is not relevant to a specific person, e.g., owner-occupiers will not be asked about the amount of rent they pay. In such cases, the question "does not apply" to this person, and the variable receives a code of "-2".
[-3] Implausible value – Sometimes invalid answers occur when respondents fill out a paper questionnaire (e.g., working hours over 168 per week, unreadable answers). In such cases the variable is recoded "-3".
[-4] Inadmissible multiple response – Some questions contain multiple answer options and respondents are asked to pick one answer. In the paper questionnaire respondents sometimes ignore this request and give more than one answer (e.g., "very good" and "good" when asked about their current health status). In such cases the code "-4" is assigned to this variable.

[-5] Not included in this version of the questionnaire – Respondents receive different questionnaire versions based on their respondent status (anchor person, household member, or new household member) and their mode choice (paper or online questionnaire). Some questions are not part of one or more of these different questionnaire versions. For respondents who did not receive a question due to their questionnaire version, the variables are coded "-5".
[-6] Version of questionnaire with modified filtering – Currently not used.
[-7] Only available in less restricted edition – Currently not used.
[-8] Question not part of the questionnaires this wave – Is assigned if the question is not asked in this particular survey wave.
[-9] Don't want to answer [only CAWI] – Only applicable to respondents who answered the questionnaire online. Is assigned if "I do not want to answer that" is ticked in the online questionnaire.
[-10] Break-off [only CAWI] – Only applicable to respondents who answered the questionnaire online. Is assigned if respondents were not asked this question because they broke off the online questionnaire before completing it.

This identifier groups all individuals into their respective households at the time of the most recent wave. This means that a person's HID can change over time, for example if an adult child moves out of their parents' home and starts their own household. The HID reflects the status prior to the fieldwork phase. Changes in household membership are only accounted for in the HID of the subsequent wave.

This identifier groups individuals into their original households at the start of the panel. That means that a person's CID is time-constant and will always relate them back to the household they initially belonged to, even if they moved out since.

3 Survey Context

wave – Survey Wave

1	[1] Wave 1, part 1 (2021/22)	17027
2	[2] Wave 1, part 2 (2021/22)	9168
3	[3] Wave 2 (2022/23)	8642
4	[4] Wave 3 (2023)	7992

This variable identifies the (partial) wave in which the data collection took place.

pgmode – Survey Mode

? Survey Mode *(from: scp/w3/pgmode:pgmode[])*

210	[210] Paper questionnaire, postal (PAPI)	21141
300	[300] Online questionnaire (CAWI)	21688

The survey mode is determined by the technology respondents use to fill out a questionnaire. To prevent duplications, if respondents submit a questionnaire via multiple modes, priority is given to the data they provided via the web.

restype – Type of respondent

? Type of respondent *(from: scp/w3/Q0:restype[])*

1	[1] Anchor person (AP)	31412
2	[2] Household member (HM)	10982
3	[3] New household member (NHM)	435

Anchor persons (AP) are respondents at the time of recruitment who were drawn as part of the initial random sample at the residents' registration offices and invited to take part in the survey. In addition to the personal questionnaire, these people usually also complete the household questionnaire. Household members (HM) are respondents who were specified by anchor persons as living in the same household aged 18 and over and were also invited to take part in the survey. HM only complete the personal questionnaire. New household members (NHM) are respondents who were additionally named as household members by anchors from wave 2 onwards. In particular, this includes people who moved into the household or who have reached the age of 18 in the period since the last survey. These persons receive an extended personal questionnaire and, with their consent, are integrated into the panel as HM from the following wave onwards.
If HM or NHM leave the household after inclusion in the panel, these individuals themselves become the AP of the new household in the following wave, unless this role is filled by another member of the household. Similarly, a HM or NHM becomes the new AP if the original AP leaves the household or refuses further interviews.

ankerwechsel – Change of AP

? HH survey respondent *(from: scp/w3/ankerwechsel:ankerwechsel[])*

0	[0] Initial AP	17677
1	[1] New AP	683
2	[2] Other person in HH	7442

-8	[-8] Question not part of the questionnaires this wave	17027
-9	[-9] Don't want to answer [only CAWI]	0
-10	[-10] Break-off [only CAWI]	0

ANKERWECHSEL indicates if the respondent type of a person changes over time. If the original anchor person (AP) leaves the household or refuses further interviews, a household member (HM) or new household member (NHM) of the same household is designated as the new AP. Similarly, after leaving the original household, an HM or NHM who was included in the panel becomes the AP of the new household in the following wave, unless this role is filled by another member of the household.

The filtering of this question was changed across different times of data collection. In wave 1 part 1, respondents were asked the question if they were in a certain employment situation (PEMPSTAT_V1=1 to 5). In the paper questionnaire, they were also asked this question if they had answered 'Yes' to the question about previous employment (PGAINEMP==1). In subsequent waves, all respondents were asked the question.
In addition to the filter conditions listed above, the variables PLABINCBRUT and PLABINCNET are also coded as -2 if respondents state that they have no income (PNOLABINC==1).

pladder01 – Soc. ladder: own position, present

? Imagine a ladder representing the different social strata in Germany.
At the top of the ladder, on the tenth rung, are the people who are doing best: They have the most money, the best education, and a highly prestigious job. At the bottom of the ladder, on the first rung, are the people who are doing the worst: They have the least money, the lowest level of education, and are unemployed or have a job that no one wants or respects.
Please think about where you currently stand on the ladder. On a scale of 1 (bottom) to 10 (top), please indicate which rung of the ladder corresponds to _your current position_ in society. *(from: scp/w3/Q14:pladder01[])*

pnetmodwill01 – Network module: willingness to participate [only CAWI]

? An important question for the "Living in Germany" study is whether the people with whom you have frequent contact are like you or are completely different from you. We need your participation in order to answer this question.
In a future survey, we would like to ask all participants to invite people with whom they have frequent contact to our study. They can include, for example, friends, neighbours or work colleagues. They can also include family members who do not live in your household.
The invitation could, for example, be forwarded in person, by post or by e-mail. Participation would be voluntary, of course, and there would be a small thank you gift for your assistance.
In preparation for this future survey, we would like to know:
Would you be willing to invite such a person to our study? *(from: scp/w2/Q153a:pnetmodwill01[])*
