German Social Cohesion Panel

Established in 2021, the German Social Cohesion Panel (SCP) is a wide-ranging representative longitudinal study of private households in Germany, carried out in collaboration of the Research Institute Social Cohesion (RISC) and the German Socio-Economic Panel (SOEP).

The aim of the SCP Documentation is to thoroughly document the survey's data collection and data processing.

Reading Aid

This representation of the questionnaire contains the same information as the portal panel-data.org.

Here, in addition to the *question number*, *question text*, *interviewer instructions*, and *answer options*, you find printed in green the *file name* and the *variable name* with the *variable label*, which contains information from the question. If you see rows of green lines below the answer option, the questionnaire defines several variables or information is stored in more than one dataset.
The *routing by filters* is depicted in blue.
Each variable is preceded by an identifier, which usually contains the question number and which is used when the variable is used in filters in subsequent questions. Such filters are usually placed as input filters (gatekeepers) at the beginning of a question. An identifier that is referred to in the input filter of a subsequent question is marked yellow as an example.
This reading aid does not cover a few exceptional cases: If the filter (as gatekeeper) only affects one of several variables for a question, the filter is printed in blue behind the variable. There you will also find a "go to" command in the form 2 @ Q73. Here, the questionnaire skips to question 73 if answer 2 was given.
Phrases that are not already translated in English are displayed in German and preceded by [de].

About this Questionnaire

This questionnaire contains all questions from wave 3 (W3) of the German Social Cohesion Panel (SCP). The survey took place from May 10, 2023, to September 4, 2023. It targeted so-called anchor persons (AP), who were initially randomly drawn from population registers, their additional household members (HM) over the age of 18 they had previously named, as well as new household members (NHM) over the age of 18 named by the anchor persons in this wave.

The questionnaire consists of several sections. All respondents received an individual questionnaire. For NHM, this included some additional questions on biographical and unchanging sociodemographic characteristics due to their recruitment to the panel. Anchor persons additionally received a household questionnaire.

The survey was conducted as a mixed-mode survey (PAPI and CAWI). In addition to the German questionnaire, respondents in the CAWI mode also had an English-language questionnaire available. In CAWI mode, if respondents clicked "continue" without answering a question, the question was displayed again. Generally, two additional response options were added to those shown here in the questionnaire ("I cannot answer that" and "I do not want to answer that"). A new prompt also asked them to answer the question (in full) or to select "I cannot answer that" or "I do not want to answer that". Question-specific differences in the questionnaire presentation between the two modes are listed in this document under the respective question.

For some questions in the online questionnaire, so-called preload variables containing data from the previous wave are used in the filter conditions. In this document, these preload variables appear only in the filter conditions. They follow the naming convention 'pre_[variable name]' and are numbered sequentially with 'PRELOADS_[number]'. Their codes correspond to the answer options for the respective question. Follow-up questions regarding preload variables are denoted with the prefix 'confirm_'. The presentation of the preload variables is for documentation purposes only; these variables are not included in the dataset itself.

CAWI: This question is part of a loop that runs from Q117a to Q117e. The questions in the loop are asked once for each reported child. The loop ends when the respondent no longer wishes to report any more children (see Q117e) or after a maximum of 10 loop cycles. The number of iterations is part of the question text.
German PAPI: Instead of a loop, proxy information for up to 10 children was collected via offspring roster.

Q0 & Q115: restype=2:3 & pownchild01_n=1

Q117e Are there any other children not or no longer living in the household that you have not listed yet?
Listed so far:
[number of loop iteration]. [first name number of loop iteration], [gender number of loop iteration]

Yes, there are more children	1
No, all my children are listed	2
There is at least one more child, but I do not want to enter their details.	3

Q117e:pchildallX_n	p	pchildall10	10. child: additional child? [only CAWI]

CAWI: This question is the end of a loop that runs from Q117a to Q117e. If the respondent answered this question with answer option 1, "Yes, there are more children", they were directed back to question Q117a and the number of iterations in the subsequent question texts was increased by 1. This loop

ends when the respondent answered Q117e with either answer option 2, "No, all my children are listed", or 3, "There is at least one more child, but I do not want to enter their details.", or after a maximum of 10 loop cycles. The questionnaire then continued with Q118 (for HM) or Q154 (for NHM).
German PAPI: Instead of a loop, proxy information for up to 10 children was collected via offspring roster.

CAWI: This question is part of a loop that runs from Q119a to Q119e. The questions in the loop are asked once for each reported person. The loop ends when the respondent no longer wishes to report any more persons (see Q119e) or after a maximum of 12 loop cycles. The number of iterations is part of the question text.

German PAPI: Instead of a loop, proxy information for up to 10 household members was collected via household roster, with additional answer option="Lebe allein im Haushalt".

CAWI: This question is the end of a loop that runs from Q119a to Q119e. If the respondent answered this question with answer option 1, "Yes, one other person lives in the household", they were directed back to question Q119a and the number of iterations in the subsequent question texts was increased by 1. This loop ends when the respondent answered Q119e with either answer option 2, "No, I have listed all the people in the household apart from me", or 3, "There is at least one other person living in my household, but I do not want to enter their details", or after a maximum of 12 loop cycles. The questionnaire then continued with Q120.

Q152 Does your household usually have a certain amount of money left at the end of the month that you can put aside or into a savings account?

This could consist of regular deposits into savings for asset accumulation, for example: bank savings plans, Riester or Rürup retirement plans, other private pension plans, building loan agreements, endowment life insurance policies, or government-subsidized asset accumulation savings plans.

We are also referring to "saving for a rainy day"—for major purchases or for emergencies—as well as saving to pay off loans ahead of schedule.

Please select all answers that apply.

Yes, savings for asset accumulation 1
Yes, precautionary savings 1
No, none of these 1

Q153 In order to obtain a reliable picture of the coexistence of people in Germany, we would like to interview everyone in your household who is at least 18 years old if possible.
Please enter all household members aged 18 and over who have not yet received a questionnaire in our study. In order to be able to invite these other people to the study, we will need their first name, surname, age and gender.
As a thank you gift for participating, these other people will also receive €10 after the survey.

Enter person(s) aged 18 and over in the household 1
There is/are no person(s) aged 18 and over in the household who has/have not yet received a questionnaire 2
There are other persons aged 18 and over in my household, but I do not want to enter their details 3

The variable OTHERUNNAMEDWPHH is not included in the datasets p or h for data privacy reasons, because it could deanonymize respondents.

The variables OTHERUNNAMEDWPHH_FIRSTNAMEX, OTHERUNNAMEDWPHH_LASTNAMEX, OTHERUNNAMEDWPHH_AGEX and OTHERUNNAMEDWPHH_GENDERX are not included in the datasets p or h for data privacy reasons, because it could deanonymize respondents.

CAWI: This question is the beginning of a loop that runs from Q153a to Q153b. The questions in the loop are asked once for each reported person. The loop ends when the respondent no longer wishes to report any more persons (see Q153b) or after a maximum of 10 loop cycles. The number of iterations is part of the question text.

German CAWI: proxy information for up to 10 household members aged 18+ via Q153a-Q153b, drop-down lists for age and gender, no additional sentence at the end of the text; German PAPI: proxy information for up to 8 household members aged 18+ via household roster, additional sentence at the end of the text "Wir versichern Ihnen, dass die Umschlagseiten mit den Kontaktdaten bei infas sofort nach Eingang vom Fragebogen getrennt werden.", additional answer option="Es gibt keine anderen Personen ab 18 Jahren im Haushalt"

Yes, enter another person aged 18 and over 1

No, these are all persons aged 18 and over who have not yet received a questionnaire 2

There are other persons, but I do not want to enter their details 3

This question is not included in the datasets p or h for data privacy reasons, because it could deanonymize respondents.

CAWI: This question is the end of a loop that runs from Q153a to Q153b. If the respondent answered this question with answer option 1, "Yes, enter another person aged 18 and over", they were directed back to question Q153a and the number of iterations in the subsequent question texts was increased by 1. This loop ends when the respondent answered Q153b with either answer option 2, "No, these are all persons aged 18 and over who have not yet received a questionnaire", or 3, "There are other persons, but I do not want to enter their details", or after a maximum of 10 loop cycles. The questionnaire then continued with Q155.

German PAPI: Instead of a loop, proxy information for up to 8 household members was collected via household roster.

Q154 **Further surveys are planned for this scientific study. In order to be able to reach you again, we have to retain your address. The Data Protection Act only allows the storage of your address if you agree to it. Your address will be kept separate from the questionnaire and will be used solely for further surveys in the "Living in Germany" study. Participation in a further survey will be voluntary, of course.**
Your address will never be associated with your responses.
Your information will remain absolutely anonymous.
Your continued support for our study is very important. We will be very grateful if you continue to support us.
Do you agree to do so?
